

Άσκηση 1

Main1

```
A=[1,2,3; 4,5,6; 7,8,9]
```

```
[M,m]=maxmin(A);
```

```
fprintf("Maximum=%d, Minimum=%d",M,m);
```

maxmin

```
function [M,m]=maxmin(A);
```

```
M=A(1);
```

```
m=A(1);
```

```
for i=1:3
```

```
    for j=1:3
```

```
        if M<A(i,j)
```

```
            M=A(i,j);
```

```
        end
```

```
        if m>A(i,j)
```

```
            m=A(i,j);
```

```
        end
```

```
    end
```

```
end
```

```
end
```

Άσκηση 2

Main2

```
A=[-1,2,-3; 4,-5,6; -7,8,-9]
```

```
[p,n]=posNeg(A);
```

```
fprintf("Maxtrix has %d positives and %d negatives", p,n);
```

posNeg

```
function [p,n]=posNeg(A);
```

```
p=0;
```

```
n=0;
```

```
for i=1:size(A)
```

```
    for j=1:length(A)
```

```
        if A(i,j)>0
```

```
            p=p+1;
```

```
        else
```

```
            n=n+1;
```

```
        end
```

```
    end
```

```
end
```

```
end
```

Άσκηση 3

Main3

x=dice

dice

```
function [x]=dice;  
x = floor(mod(10*rand(1),6))+1;  
end
```
